

# PINKCC CHALLENGE 2025

*Revolutionizing Ovarian Cancer Research  
with AI*

A 10-week competition starting April 2025  
Grand finale on June 13, 2025  
📍 Institut du Cancer de Montpellier

## PINKCC CHALLENGE 2025

KICKOFF WEBINAR

# About Montpellier Cancer Institute

The Montpellier Cancer Institute (ICM) is a leading **Comprehensive Cancer Center**, a member of **Unicancer**, bringing together:

- A hospital with an **integrated supportive care department**
- The **Montpellier Cancer Research Institute (IRCM)**
- A **prevention department, Epidaure**

This unique structure ensures seamless continuity between **patient care, fundamental research, applied research, and social sciences research.**

# About Us

In 2022, **Professor Stéphanie Nougaret**, radiologist at **ICM** and co-leader of **SIRIC Montpellier Cancer's PRIORITY Program**, founded the **PINKCC Lab** at the **Montpellier Cancer Research Institute (IRCM)**.

The team focuses on **AI-driven precision imaging** to create **virtual cancer biopsies** and develop models to **optimize radiotherapy treatments**.

The **Montpellier Cancer Integrated Cancer Research Site (SIRIC)**, accredited by the **National Cancer Institute**, brings together a community of **clinical and multidisciplinary researchers** dedicated to advancing the understanding, prevention, and treatment of cancer.

# Ovarian Cancer with Peritoneal Carcinomatosis

- Most lethal gynecological cancer: 250,000 new cases – 184,000 deaths , 50% survival: 1 death/2min
- Slow progress in improving survival rates
- Highest rates in Europe with 55% predicted increase in incidence by 2035

## Highly Heterogeneous Cancer

## High Volume of disease

**SINGLE SITE BIOPSY - SINGLE TIME POINT**  
Limited value

**MULTIPLE BIOPSIES - MULTIPLE TIME POINTS**  
Invasive- Impractical

**Treatment challenge**

# PINKCC Challenge: our partners

*We will soon share details about the entire academic jury and our partners, but here's a brief overview...*

**Stéphanie Nougaret**  
ICM (France)

**Christopher Bridge**  
Harvard Medical School  
(USA)

**Hugues Talbot**  
Centrale Supélec  
(France)

**Anne Laurent**  
ISDM (France)

*More to come soon!*

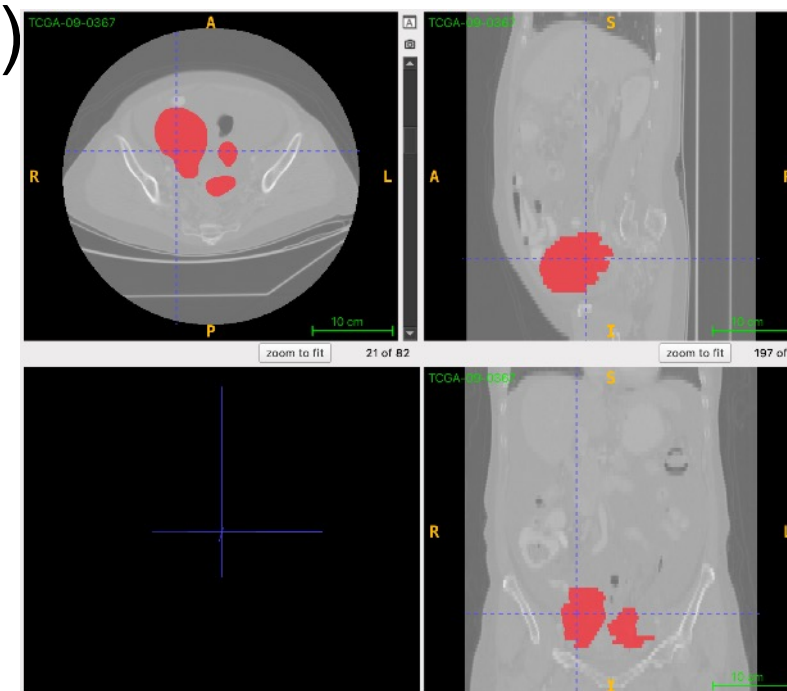

# Technical details: Data

Memorial Sloan Kettering  
Cancer Center

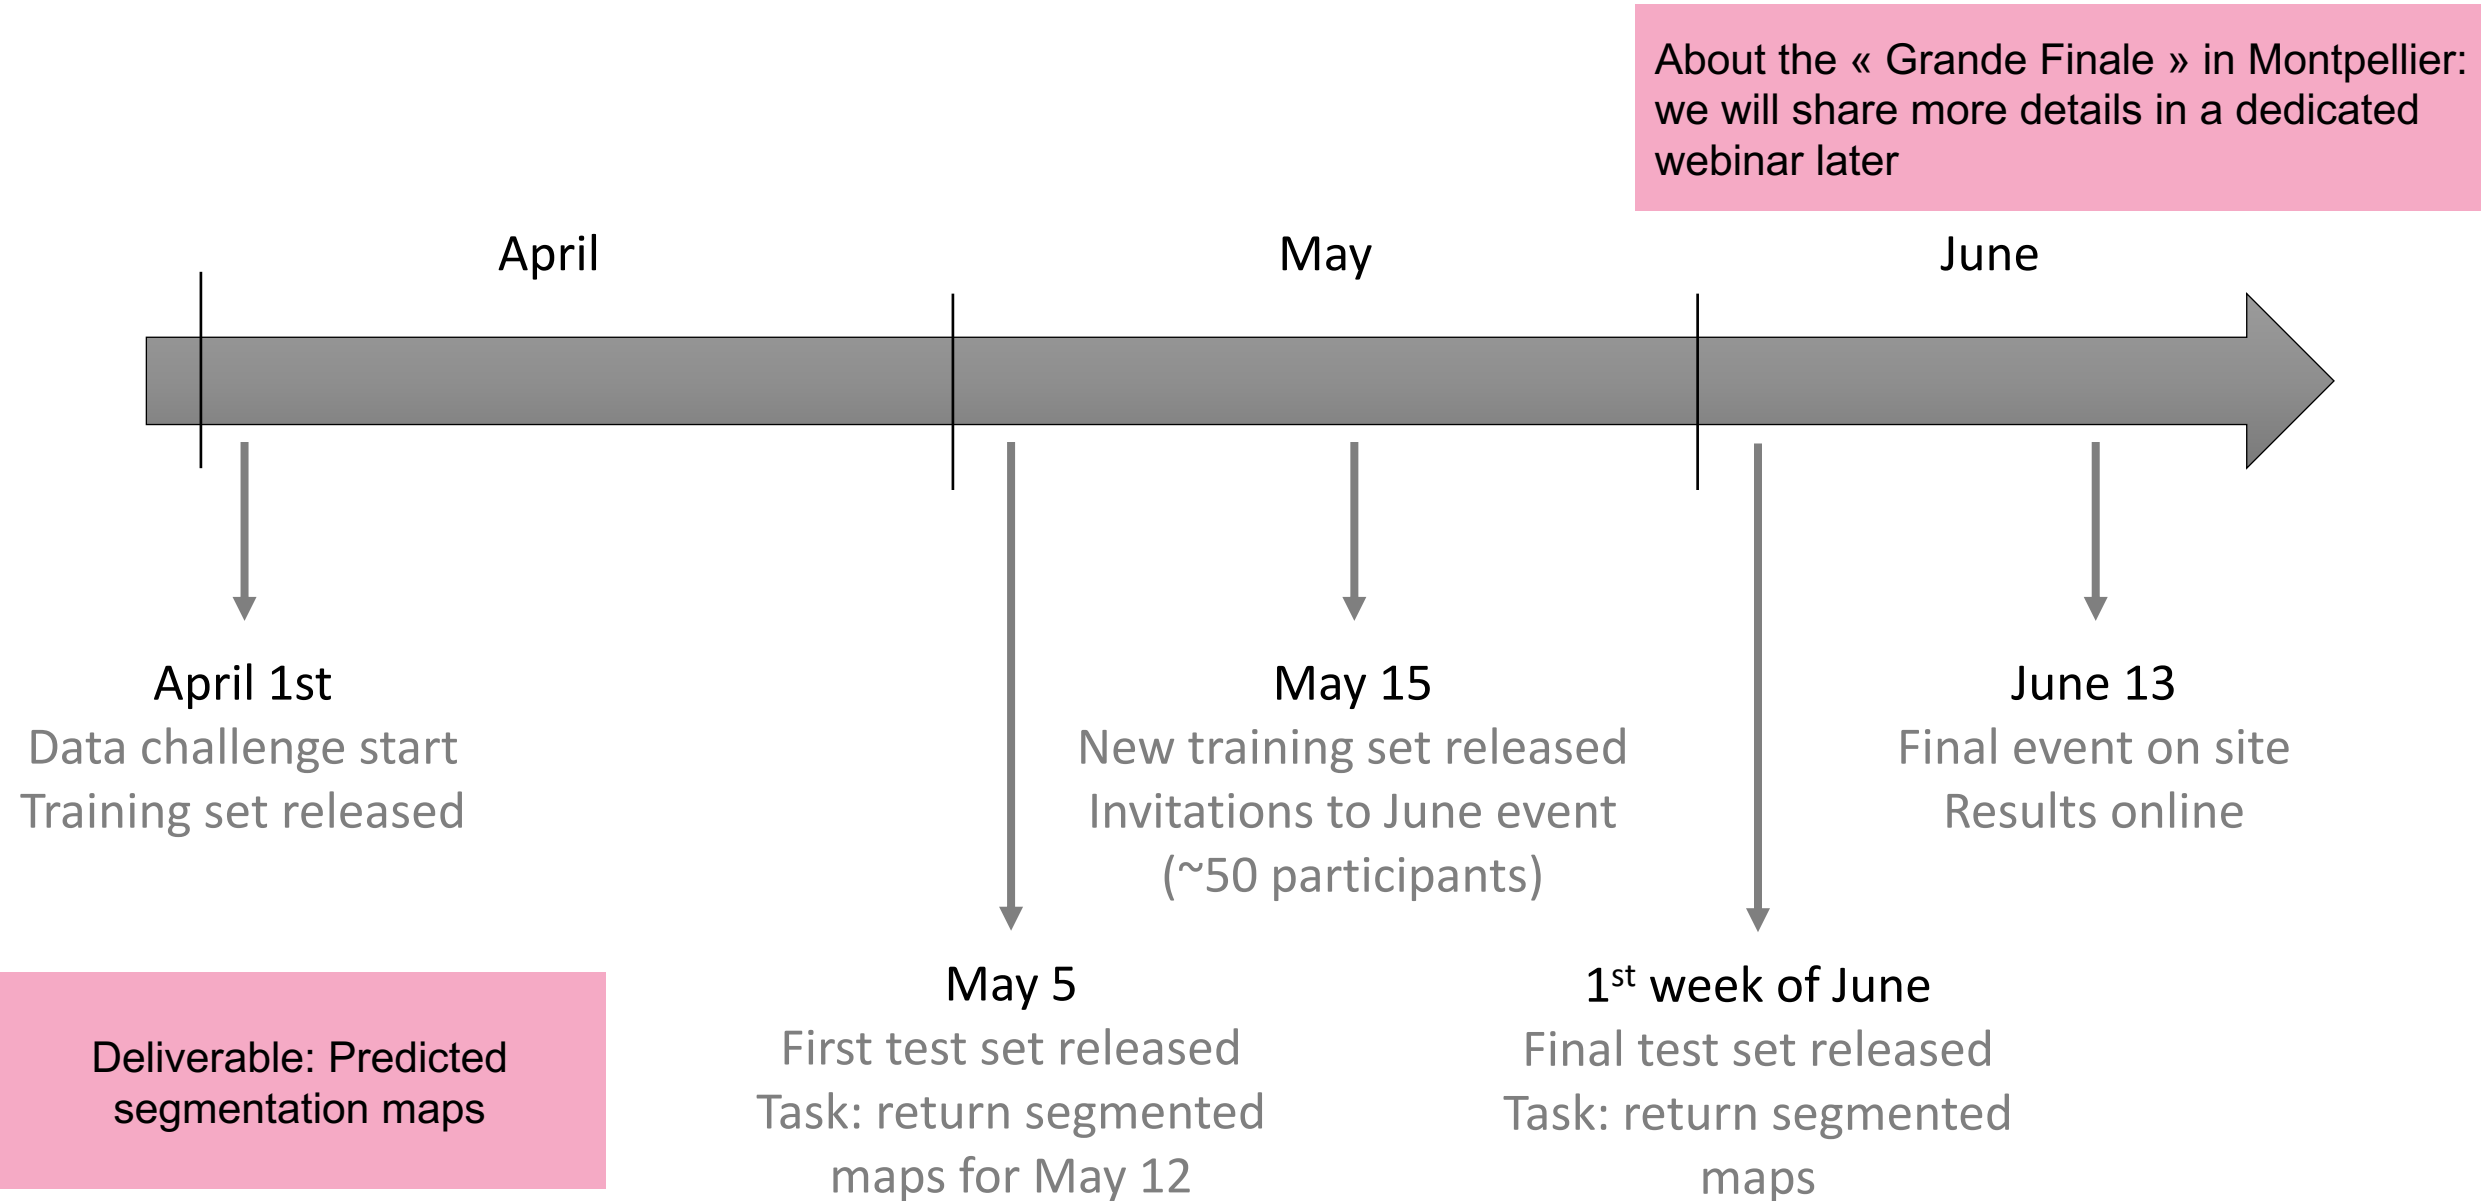

- 250 annotated CT scans
  - 3 labels (background, primary tumor, metastases)
  - NIFTI format
  - Total size: 6 GB
  - From 2 open-source datasets
  - Available on Filesender
- 
- Possible to use open-source data and models
  - Not possible to use private data

# Technical details: Computing resources

- Possible to train on your GPUs
- ISDM graciously provides access to their HPC infrastructure with A100 GPUs
- One GPU leader (personal account)
- More info at <https://meso-lr.umontpellier.fr>
- Next steps:
  - Sign the chart
  - Account creation, rules for GPU sharing
  - Connect and train!

# Timeline

# Evaluation

- To send: Predicted segmentation maps
- Nii.gz format, similar to the training set labels
- Upload on professional or personal Drive and send to [max.dudognon@gmail.com](mailto:max.dudognon@gmail.com), [jonathan.dong@epfl.ch](mailto:jonathan.dong@epfl.ch), et [stephanie.nougaret@icm.unicancer.fr](mailto:stephanie.nougaret@icm.unicancer.fr)
- Single submission by team
- **Evaluation metrics: dilated Dice score, precision/recall, Dice score**
- Key dates of first phase:
  - May 5: Test set released
  - May 12: Deadline for submissions
  - May 15: Results

# Grand finale

- June 13: on-site event in Montpellier
  - Full day with lab visits, conference, prizes
  - More info coming soon
- 
- Sponsored invitations based on mid-term results
  - If you are not selected but would like to continue, it is possible! (especially for students)
  - In any case, possible to join the leaderboard

# Any question?

- Technical support on Discord
- Technical team:
  - Maxime Dudognon
  - Charles Berger
  - Gladis Valenzuela
  - Jonathan Dong
- Do not hesitate to reach out!
- We can answer questions, while preserving equity between teams
